## How To Configure gathering

Basically install the 'gathering' Folder into your '.../wp-content/themes/' folder and activate it. Everything should work. If you'd like to use the included plugins then, (1) read any of the authors instructions if included (2) drop them into your '...wp-content/plugins/' folder and (3) activate them. I've wrapped all the plugins (I hope) in 'if exists' calls so if you choose not to install the plugins they simply won't show up.

gathering comes with three other styles. Each one has icons and link color changes. They are in the 'stylesheets' folder. If you want to use one you'll have to copy and paste at this point in time.

Here's some other configuration suggestions:

**FlickrRSS:** Looks best with seven pictures selected.

**Author Highlighting:** For author comment highlighting go to line 34 & 35 of the comments.php and enter your information there.

## License

**Gathering is released under GPL. Please leave the footer links to tri star designs and IconKits.com. While I'd appreciate some link love myself do what you will with my link in the footer.**
